

The Best Galmi type ever !

Onion SAFARI

Allium cepa L.

SAFARI is a short day onion, Galmi type. Our breeding work offers to producers an excellent variety with homogeneous calibre, form and colour skin. In addition, with a very low flowering rate, it assures a very high quality bulbs production. Few days earlier than DAMANI, SAFARI also shows an excellent shelflife (subject to a full maturity harvest - 80% falling - and stored in a dry and ventilated place).

BULBS

- Light purple
- Flattened thick shape
- Medium size
- Thin neck
- Strong taste

MATURITY

- 100 to 105 after transplanting

STORAGE

- Very good storage (6 months in a dry and ventilated place)
